.380 ACP (9 MM Kurz)

The finest submachine gun in the world

- small
- rugged
- reliable
- simple
- accurate
- fast
- easily controlled
- selective fire
- adopted for silencer

The MAC M-11 submachine gun with 32 round magazine

The M-11 is a totally new combat automatic self defense weapon. It is barely larger than a standard pistol yet provides awesome fire power when needed. The M-11 is a unique

design which has been proven reliable under the most adverse conditions. It has an unusual acceptance of grit, sand, dirt, mud and water because of its simple design.

The M-11 has unprecedented firepower in automatic fire (approx. 1000 rounds per minute) yet has easy to control stability. The bolt telescopes over the barrel which not only makes for a compact weapon but adds to the balance and stability of the weapon in operation. Recoil and "climb" are minimized.

The M-11 is adapted for its unique sound and flash suppressor making it practically inaudible for clandestine operations, special forces, right operations or other special uses. The suppressor has an indefinite life, does not affect accuracy and is effective in both semi and full automatic fire.

The M-11 has been thoroughly tested, evaluated and marketed throughout the world and has been found to be an ideal light individual defensive weapon. Technical data is shown on the reverse.

technical specifications

	INCHES
Length without stock	8.75 (222 MM)
Length stock extended	18.11 (460 MM)
Barrel length	5.06 (129 MM)
Weight gun with empty magazine	3.50 lbs (1.57 Kg)
Type of fire	Selected semi-automatic or full automatic.
Cyclic rate of fire	Approx. 1200 rounds per minute.
Front sight	Protected post.
Rear sight	Fixed aperture for 50 meters.
Safety arrangements	Two manually operated "safe" positions for locking bolt in open or closed position.

The retracting knob will lock the bolt in closed position by rotating the knob 90 degrees.

A second safety is located to the side and slightly forward of the trigger guard on the right hand side of the weapon. Pulling the safety lever to the rear locks the bolt in open or closed position.

The weapon employs blowback operation and fires the .380 ACP (9mm Kurz) cartridge.
